Foreword

It was a busy start to the year for the Living Lies Foundation, with a number of projects reaching their milestones and others continuing to make progress. This newsletter highlights some of the key achievements from the first quarter of 2021, and provides an update on the projects we are working on.

In January, a new milestone was achieved for the Watari Irrigation Scheme in Cameroon. The project, which has been supported by the Living Lies Foundation, has now reached its final stage of construction. This is a significant achievement for the farmers who are directly benefiting from the project, and it is expected to have a long-term impact on their livelihoods.

In addition to the Watari project, the Impact Committee gathered for its third meeting of 2021 in January. The committee reviewed project developments, events and activities in the previous quarter and discussed strategies for the upcoming year. The ninth meeting of our Impact Committee is scheduled for the first quarter of 2022, and will focus on the evaluation of project outcomes and the identification of areas for improvement.

The campaign entailed educational and training activities targeted at controlling transmission, early diagnosis and treatment, and prevention. The campaign has led to more than 100 adolescents who were referred for urgent medical care, while the other half received counselling on sexual health and other health issues. The campaign has contributed not only to the government's efforts to control STIs/HIV, early and unwanted pregnancies, gender-based violence, and nutritional deficiencies in young women, but also to the economic development of Cameroon.

We look forward to highlighting the LLF's impact across the Arab world, Sub-Saharan Africa, and beyond, through images, video and infographics for beneficiary countries.

Q1 2021 Highlights

Foreign

New fleet driving sanitation improvements in Conakry

The project is also creating hundreds of direct and indirect jobs for local residents, including the drivers of the sanitation trucks. The campaign has contributed not only to the government's efforts to control STIs/HIV, early and unwanted pregnancies, gender-based violence, and nutritional deficiencies in young women, but also to the economic development of Cameroon.

Sanitation trucks delivered to the National Emergency Management Agency in Kano State

The fleet of trucks was handed over in a ceremony held under the patronage of His Excellency Professor Dr. Waleed Ahmad J. Addas. The campaign entailed educational and training activities targeted at controlling transmission, early diagnosis and treatment, and prevention. The campaign has led to more than 100 adolescents who were referred for urgent medical care, while the other half received counselling on sexual health and nutritional deficiencies. The campaign has contributed not only to the government's efforts to control STIs/HIV, early and unwanted pregnancies, gender-based violence, and nutritional deficiencies in young women, but also to the economic development of Cameroon.
